

How do we see and hear?
(Science and D.T. topic)

	<h2 style="color: blue;">Homework Options due by 11th December</h2>
Task 1	Design a pair of glasses. Think about who will wear them - will it be a girl, a boy, an elderly person, a popstar, a sports star?
Task 2	Draw or make a lighthouse using any media you like - pens, paints, collage, pencils, chalk, Lego, plasticine.
Task 3	Get someone to help you cut a large square in the middle of a piece of cardboard - a cereal packet is perfect! Hold it up and look out of your bedroom window - using the frame as a view finder. Draw what you can see. Add as much detail as you can. If you are using pencil, see if you can add some shading.
Task 4	Use a lamp to light up an empty wall in your home. Use fingers, puppets or toys to create a shadow theatre!
Task 5	Draw and label all the sources of light that you can think of.
Task 6	Collect different objects and materials from around your home. Use a torch and shine light through them. Sort them into objects which are transparent (light travels straight through them), opaque (no light travels through them at all) and translucent (some light travels through them).

Autumn Term 2 Homework Onyx class
